

# StudyGeeks Application

Github Repo: <https://github.com/JWang169/cs546-group1>

Group 1: Junzhe Wang, Loughlin Claus, Chran Suresh, David Ovsiew

The idea of this application is to allow students to find tutors based on availability, price range, etc.

The primary value of this application is the improved connection between tutors and students. The goal is for this improved business to justify profitable service fees.

## Core features:

- **Main Page**  
Contains list most commonly requested subjects, common prices for tutoring, etc.
- **Search Tutors**  
Allow users to search for tutors: Users can search for tutors by different categories including subjects, price, credentials, area, etc.
- **View Tutor**  
Allow users to view tutor information displaying credentials, subjects, availability, and ratings  
`http://studygeeks.com/tutor/:id`
- **Tutoring Portal**  
Allow text communication between tutor and students
- **Review Tutor**  
Allow users to post reviews and ratings of those they have been tutored by
- **Request Tutor**  
Allow users to request a tutor in a subject.

## Extra features:

- Implement a video chat system between tutors and students into tutoring portal
- Rate the tutors - Allow users to rate the tutor after their session
- Update the user's Google calendar when they schedule a session
- Screens share between tutor and student
- Latex templates share between tutor and student
- Advertisements - include advertisements on sidebar, to collect additional income
- Premium Tutor status - tutor can pay extra money to be put higher on search results
